

Maternal-infant Child Health and Environment Research Symposium:
“**How Local Research can Influence Policy and Practice**”

Thursday, February 26th, 2009, 08:00-17:00 hrs
Maple Leaf Room, Lister Conference Centre, University of Alberta

Poster Presentation:

Biostatistical Consulting Core:

The Biostatistics Consulting Group is a partial cost-recovery unit that provides biostatistical support and advice to researchers within the [Women and Children's Health Research Institute \(WCHRI\)](#). Researchers can access biostatistician consultants that focus on key statistical aspects of any quantitative research study. High quality research requires the use of appropriate statistical principles and techniques. By accessing a consultant before starting a study, statistical principles can be included in your design which may lead to stronger methodology, reduced costs, shorter study time, and clearer conclusions. We believe our statistical advice will strengthen your research project.
